

ENDECK™ DECKING

Endeck Capped Cellular PVC Decking

Finally, a deck with a pretty, thick skin.

# Endeck Woodland™ Series by Eastern Metal Supply

Colors to complement your home and landscape;  
strength to complete your low-maintenance lifestyle.

Endeck captures the classic look and feel of real wood, but leaves the headaches and extra maintenance time and expense behind. The embossed woodgrain on both sides of Endeck's capped cellular PVC deck boards mimic the look and feel of real wood. Even though Endeck with Hard Cover Technology may look like wood, your new deck certainly doesn't act like wood. Importantly, the Woodland Endeck boards provide a safer home environment underscored by its best Class A Flame Spread Rating for fire resistance.

**No Sanding • No Staining • No Splinters • No Twisted, Cracked or Warped Boards**

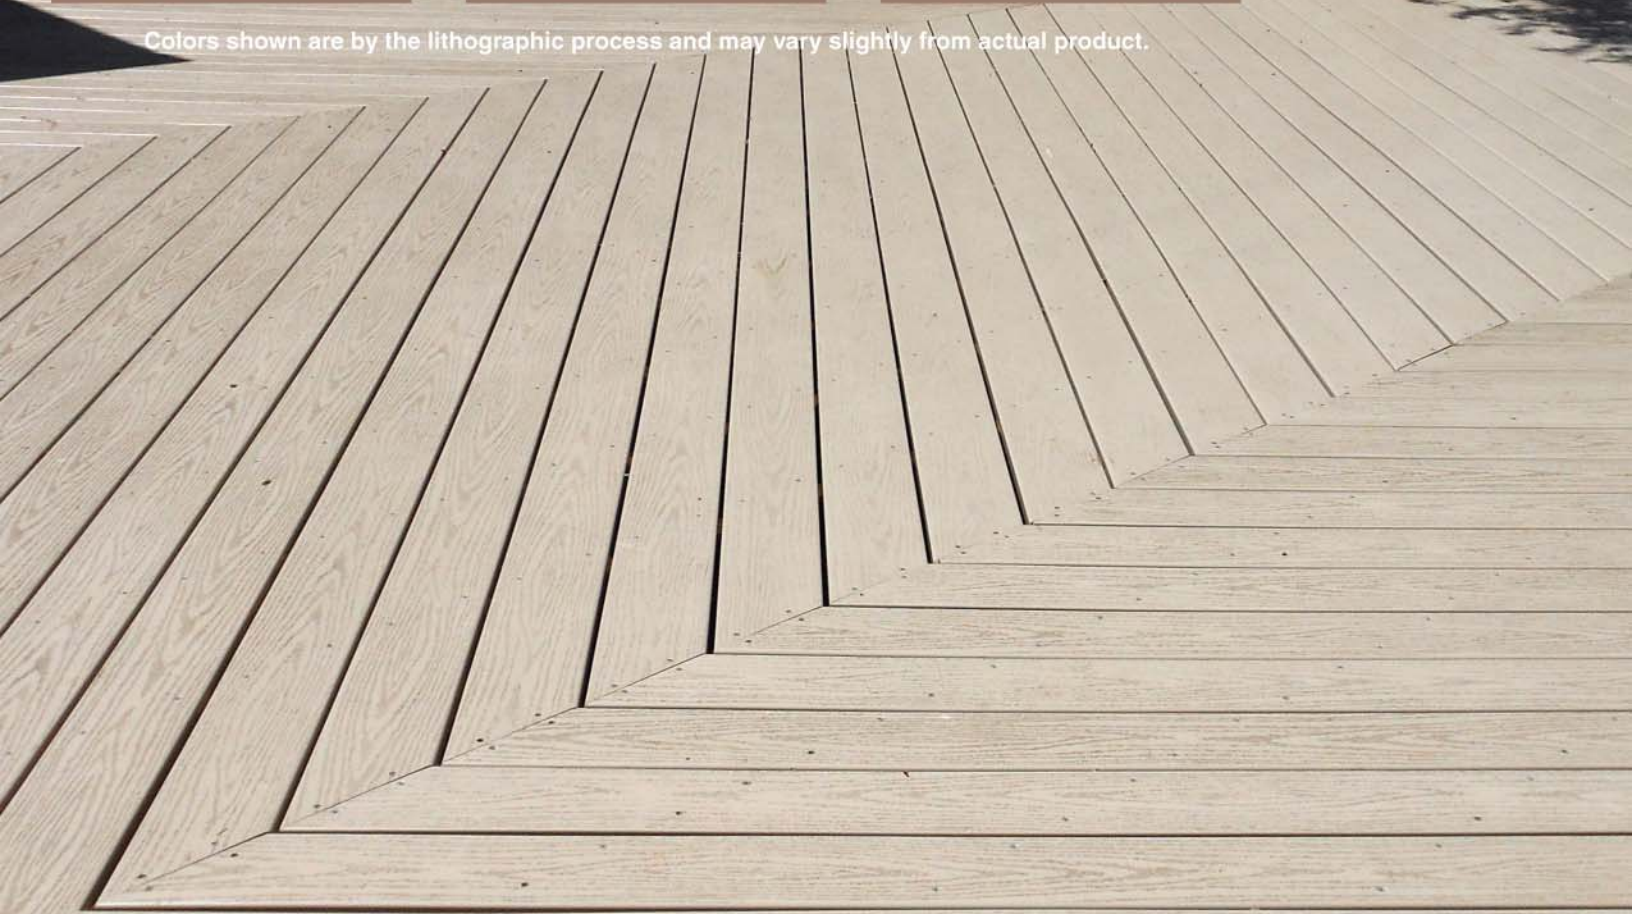

Ashwood

Beechwood

Olivewood

**Fade-Resistant • Stain-Resistant • Slip-Resistant**

# Endeck Forest™ Series by Eastern Metal Supply

Fade and Stain Resistant, with a deeply embossed wood grain and rich dark colors.

With an unmatched ability to resist stains and fading, Endeck Forest Series decking is sure to provide many years of worry-free enjoyment and may very well outlast your home! The deep, rich colors that run through Endeck Forest Series lend a natural beauty that is only found on the most expensive, exotic hardwoods. Our process allows for a textured plank with subtle color variations as random as those found in nature.

And, even though the colors run dark, Endeck manufacturing technology allows the decking underfoot to remain comfortable, and cooler to the touch...even on the hottest days. These boards have long proven they are ideal not only for decks but also for the tougher environments to which docks and gangways are exposed.

- Swells from moisture

**Endeck capped cellular PVC vs all others. It takes a pretty thick skin to stand up to all the punishment delivered to your deck.**

With all the activity intended for your new deck, plus everything Mother Nature will throw at it, you need a deck plank with a tough outer shell. Endeck capped cellular PVC is made to withstand most conditions, environmental and manmade, from the constant punishment of UV rays from the sun, to rain, sleet and snow, to the barrage of kids, neighbors and friends scuffing their shoes, dragging deck furniture, and dropping ketchup, mustard and hamburger grease all over it. Endeck is cooler to the touch, does not splinter, and is slip resistant, wet or dry, making it a safer deck choice for your entire family.

**Endeck Employs a Tougher Hard Cover Capstock**

- Proprietary formulation
- Years of proven weatherability
- Consistent strength and endurance
- No moisture penetration or delamination
- Stain-resistant finish
- Excellent traction wet or dry
- Code approved (CCRR-0144)
